Small enough to hold.

Six living worlds, with one shared feeling: soft light, tactile surfaces and a little quiet wonder. The vastness of space, made personal.

01 / Oceanic

Océanique

02 / Verdant

Verdoyant

03 / Desert

Désertique

04 / Frozen

Gelé

05 / Volcanic

Volcanique

06 / Crystal

Cristallin

Read left to right, then top to bottom. These are concept-art references for future 3D assets. The illustration colors can vary with terrain; the interface keeps the approved Step 3 palette.

A miniature world, carefully made.

Use the same camera, scale and light when showing world presets. Every terrain should feel as though it belongs to the same small universe.

Camera and form

Near orthographic, about 25 degrees above the equator. Keep a solid round base, gentle terrain and a clear silhouette.

Soft, shared light

Large warm light from upper left. Cool fill at about one third of its energy. Soft contact shadows, no hard rim glow.

Tactile materials

Matte painted land, satin water and cloudy crystals. Start at roughness 0.8 for land and 0.28 for water; metalness 0.

WORLD	SHAPE AND MATERIAL
Oceanic	Three readable islands and broad shallow-water bands. Satin ocean, matte sand, sparse foam.
Verdant	Rounded canopies, a winding river and quiet clearings. Soft moss, brushed grass, muted stone.
Desert	Dune ribbons, rounded mesas and one small oasis. Powdery sand, soft terracotta rock.
Frozen	Broad snow caps, pale lakes and softened ice ridges. Powder snow and translucent satin ice.
Volcanic	Rounded basalt, a quiet crater and a few warm seams. Matte mineral rock; restrained lava emission.
Crystal	Few clustered crystals around a shallow teal pool. Cloudy mineral translucency; no mirror finish.

DETAIL FOLLOWS SIZE

480px+: three main landmarks, with small painted details. 160 to 479px: one or two landmarks and broad color masses. 48 to 159px: silhouette and two or three colors. Below 48px: a simple world marker.

Growth adds a cloud, a few flowers, night lights or a small moon. Preserve the world’s identity and leave some terrain quiet.

The world gets the attention.

Frosted surfaces give controls a place to sit. Keep labels crisp, borders clear and glows restrained. Use opaque panels where blur adds little value.

WORLDLING / GLASS AND CONTROLS

Frosted glass. Quiet edges.

The world holds the color. The interface gives it room.

Soft surfaces

Deep Space and Orbit stay opaque by default.

Clear control edges

Use Dust on glass, Control Line on solid panels.

One warm action

Sunrise fill, Void label, 48px minimum height.

A visible focus ring

Aurora 2px, with a 3px gap around the control.

Éclats d'aurore

Focused field

Borders identify controls. A glow only adds emphasis.

Glass and fallback	Deep Space at 88%, blur 20px. Fallback: opaque Deep Space.
Radii and padding	8 / 16 / 24px; pills 9999px. Panel padding 20px mobile, 24px desktop.
Borders	1px Line for decoration. Control Line on solid panels; Dust on glass.
Focus and glow	Aurora outline 2px, offset 3px. Glow: 0 0 24px Aurora at 12%.
Shadows	Panel: 0 16px 48px black at 32%. Dialog: 0 24px 80px at 45%.
Controls	Sunrise action, Void label. Buttons 48px tall; icon targets at least 44px.

Alpha belongs to the background only. Keep foreground text and functional edges opaque. Check real glass compositions over the brightest artwork.

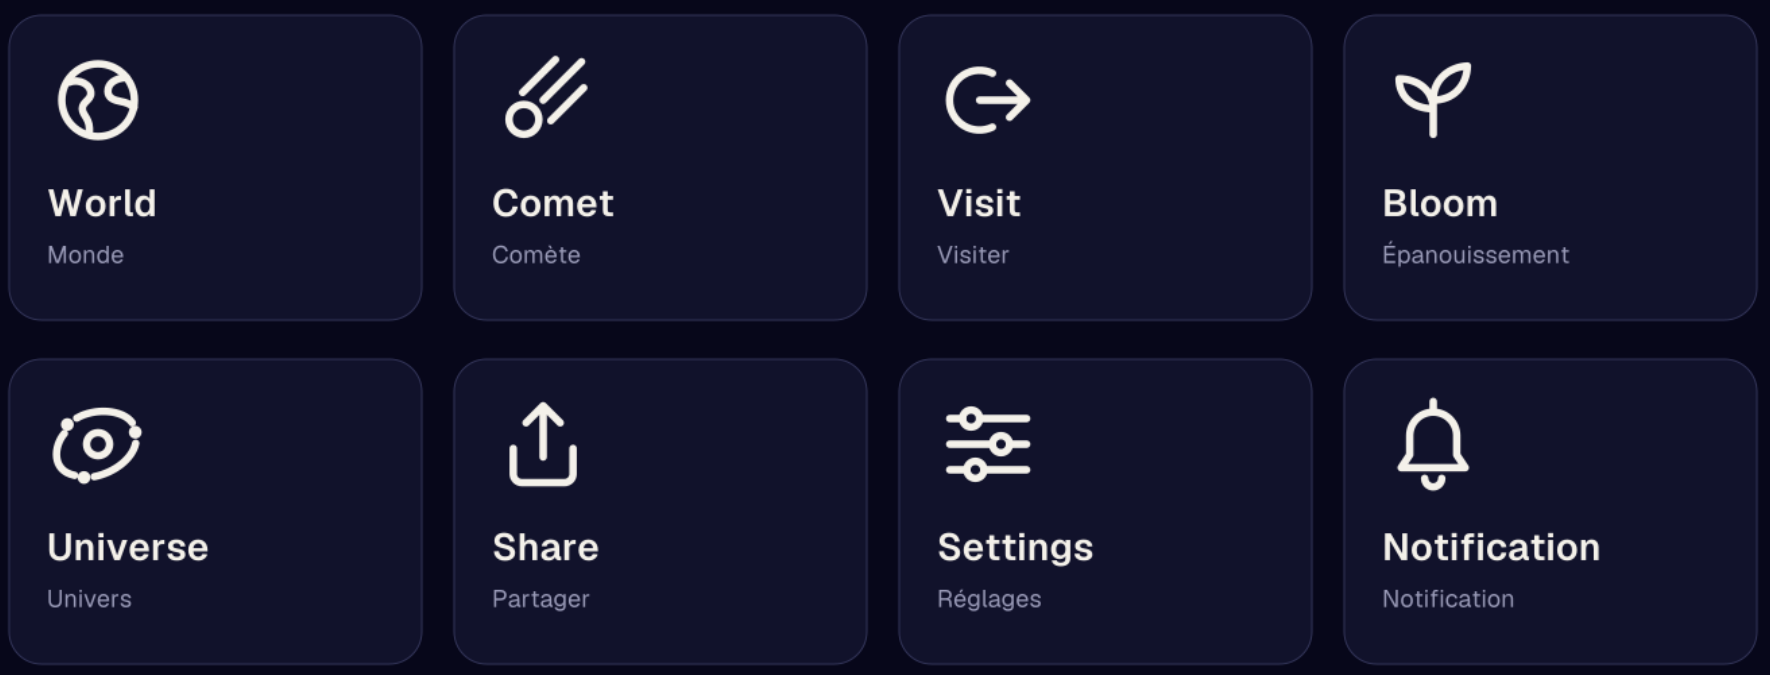

Eight signs from one family.

Simple strokes, rounded ends and a little softness. Use labels for unfamiliar actions and keep these UI symbols separate from the approved logo.

WORLDLING / 05 VISUAL LANGUAGE

Small signs. Clear meanings.

24px grid / 1.75px stroke / rounded caps and joins / one color

ACTUAL PIXEL SIZES

24px

20px

16px optical

Grid and stroke	24 by 24px; 1.75px strokes; round caps and joins. Use a roughly 20px live area, with small optical exceptions.
Sizes	20, 24 and 32px use the master. The 16px optical set has simpler geometry and 1.5px strokes. Do not reduce further.
Color and states	One foreground color. No gradients, inner shadows or glow. Use a visible label or shape change along with color.
Implementation	SVGs use currentColor. Inline the file or use the sprite. Give icon-only buttons an accessible name; hide decorative icons from assistive technology.

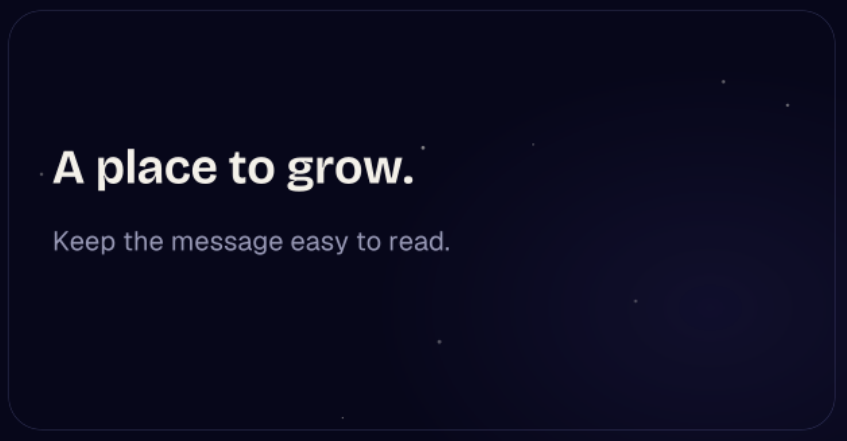

Quiet around the edges.

The mood comes from small choices: a few dots, a faint cloud of color and almost invisible grain. Keep a calm area behind text.

WORLDLING / ILLUSTRATION AND BACKGROUNDS

Leave room for the world.

DO / QUIET SPACE

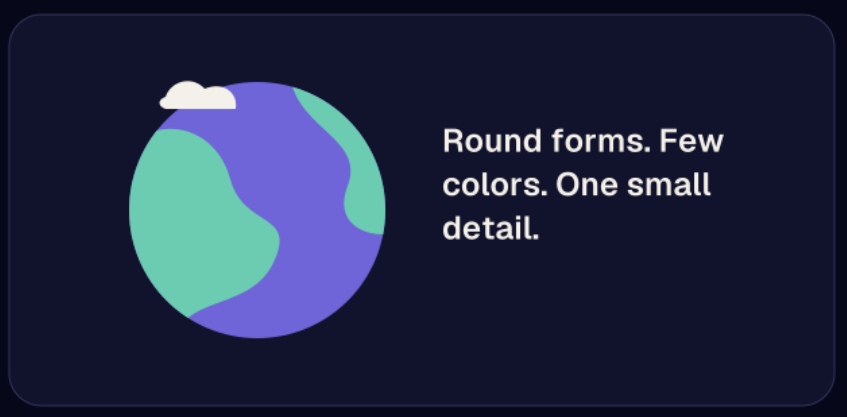

Sparse dots, faint dust and almost invisible grain. Preserve a calm area for copy.

AVOID / VISUAL NOISE

Avoid bright nebula bands, oversized stars and visible noise behind words.

DO / SIMPLE SPOT ILLUSTRATION

AVOID / SHARP AND GLOSSY

Keep 3D worlds tactile. Keep small vector illustrations simpler than the worlds.

Stars	24 to 40 dots per megapixel. Radius 0.6 to 1.5px, opacity 24% to 55%. Static.
Nebula dust	One or two broad areas, tint at most 8%. Reserve the signature gradient for heroes.
Grain	Static monochrome, at most 1.5% opacity. Background only; omit in small views.
Spot art	Round forms, two to four colors and one small life detail. Simpler than the 3D worlds.

Slow worlds. Responsive controls.

Give feedback immediately. Keep travel gentle, with no bounce, roll or flashing. Support reduced motion and a persistent Pause motion setting for ambient movement. [1][2]

MOTION	TIME	CURVE	BEHAVIOR / REDUCED MOTION
Hover / focus	150ms	(.2,.8,.2,1)	Color or border only. Focus appears immediately. Reduced: Keep color change, 100ms or instant.
Press	100ms	(.4,0,1,1)	Scale 1 to 0.985. Release in 150ms. Reduced: Color change only; no scaling.
Panel in	240ms	(.2,.8,.2,1)	Opacity 0 to 1; move up 8px. Exit: 180ms. Reduced: 150ms opacity only.
World focus	600ms	(.45,0,.55,1)	Camera shift at most 8% of viewport. No roll. Reduced: 150ms crossfade between stationary views.
Comet	900ms	(.22,.61,.36,1)	One short curved path, up to 140px in the UI. Reduced: 150ms arrival fade; no trail or travel.
Bloom	1.2s	(.45,0,.55,1)	Opacity 0 to 1; new detail scales 0.96 to 1. Reduced: 150ms fade of the completed detail.
Ambient drift	16s	(.45,0,.55,1)	Full cycle: 0px to -4px to 0px. One featured world. Reduced: Static position; no ambient animation.
Planet rotation	120s	linear	One full turn around its own axis. Optional. Reduced: Static view, with manual step controls.
Moon orbit	90s	linear	One full orbit. Small, constant speed. Optional. Reduced: Moon remains at its resting position.

Curve tuples are cubic-bezier(x1, y1, x2, y2). Drift is a full out-and-back cycle. Rotation and orbit are optional. Apply reduced-motion and pause preferences to WebGL as well as CSS.
